

Tayagorn Manorat

Business Intelligence Analyst

Charleston, SC · 954-494-4968 · tayagornm@gmail.com · linkedin.com/in/tayagornm · tayagorn.com

BI analyst at a defense contractor building production Power BI reports, Power Apps, SQL pipelines, and Power Platform tools used daily by ops and leadership. I build data systems outside of work too: API ingestion pipelines, cloud-deployed analytics, and MCP servers that connect LLMs to pull live data. Equally comfortable in the data model and in a stakeholder meeting.

EXPERIENCE

Business Intelligence Analyst | Leonardo DRS | Aug 2024 – Present | Melbourne, FL (Remote)

- Rebuilt Power BI semantic model and migrated report logic into SQL views, cutting dataset refresh time from 60 to 3 minutes
- Wrote DAX measures using CALCULATE with FILTER, ALL, and ALLEXCEPT to control filter context across reports, and used VAR/RETURN to keep complex measures readable
- Designed dynamic reports where a single slicer switches between measures using SELECTEDVALUE/SWITCH, with chart titles and labels that update automatically to match the selected context
- Applied row level security in Power BI to filter report data by user, restricting visibility at the dataset level without maintaining separate reports per audience
- Developed a paginated Power BI report where selecting a work order from a live queryable list triggers a SQL query pulling all associated receipt data and formats it as a PDF, replacing a manual lookup process
- Set up email alerts in Power BI Service that notify each user when a new document matching their pricing and program criteria is generated, attaching a copy of the relevant report
- Wrote SQL transformation logic to normalize and reconcile 12M+ rows across Cognos and an internal platform, producing unified datasets used for compliance and strategic planning
- Migrated 60,000+ records from a legacy system by writing the extraction and load query, maintaining data integrity throughout
- Built a production planning tool that traverses full bill-of-materials hierarchies via SQL CTEs and calculates scrap and yield rates per component based on inventory transactions, replacing a quarterly manual process
- Tracked monthly KPIs via a SQL stored procedure that updates on schedule, giving stakeholders a consistent baseline for comparing current and historical performance
- Audited data systems and views for inconsistencies using SQL queries, surfacing discrepancies between two systems so teams could resolve them directly
- Built a WIP scheduling report off the manufacturing execution system using historical production times to generate due dates and projected completion per production step
- Developed a warehouse dashboard giving the shipping team month-over-month performance visibility and a priority queue of items to action
- Replaced an email-based intake process with a Power App that enforces data structure and standardizes how containment actions are captured
- Designed a snowflake schema for a Power App using only SharePoint lists, avoiding a premium connector license Microsoft would have otherwise required
- Configured three additional Power Apps: an audit form with field validation across 5 audit types, a SharePoint-driven catalog of BI team reports, and a notes-capture tool embedded in Power BI to work around its read-only limitation
- Automated Power Automate flows for form-submission alerts and a SharePoint file sync that monitors a folder and auto-replaces target documents when a newer file is detected
- Partnered with engineering, operations, and finance to gather requirements, validate KPI definitions, and write process documentation aligned to regulatory objectives

Business Intelligence Intern | Leonardo DRS | May – Aug 2024 | Melbourne, FL

- Built Power BI dashboards, replacing manual Excel workflows for ops and production leadership, providing daily self-service visibility into scrap, yield, and capacity KPIs
- Migrated local Power BI reports to Power BI Service with gateway configuration, improving reliability and enabling cross-team access
- Built an Excel/VBA genealogy tool using SQL CTEs to map full product traceability, supporting contract lifecycle documentation and reducing manual lookup time

PROJECTS

AI Health Coaching System | Personal project | health.tayagorn.com

- Built Python ingestion pipelines that pull from 3 APIs (WHOOP, FatSecret, Apple Health) into a unified 20+ table SQLite schema (1.5M+ records), handling OAuth 1.0a and 2.0 token flows including auto-rotating refresh tokens
- Built an MCP server exposing 16+ tools that give a live LLM agent access to recovery, nutrition, and body composition data
- Built a versioned, append-only goals engine in SQLite with separate weekday/weekend targets (resolved by a SQL view), powering Claude-generated morning briefs and weekly reviews pushed to my phone via an HTTP POST to the Pushover API
- Built a Grafana dashboard tracking weight, macro, and recovery trends on top of the pipeline data, giving the system a live BI layer alongside the LLM coaching interface
- Used Claude Code throughout development, directing architecture and product decisions while using AI to implement and iterate end-to-end; built the system to be model-agnostic

PolyKalshi Weather Arbitrage Scanner | Personal project

- Polls Polymarket and Kalshi temperature contracts every 30 seconds across 3 cities, comparing market-implied probabilities to a prediction model blending NWS forecasts with 10 years of NOAA climatology
- Runs 5 parallel paper-trading strategies with Kelly criterion sizing, each A/B tested against an independent virtual bankroll; deployed via Docker Compose with PostgreSQL and a Streamlit dashboard

SKILLS

BI & Reporting: Power BI, DAX, Power Query (M), Semantic Modeling, Power BI Service / Fabric Workspaces, Tableau, Cognos

Data & SQL: SQL (T-SQL, SQL Server), Python, ETL/ELT, Data Validation, Data Quality

Power Platform: Power Apps, Power Automate, SharePoint, Microsoft Lists, Excel (Advanced)

Data Engineering: REST API ingestion, OAuth 1.0a / 2.0, SQLite, PostgreSQL, Docker, cron pipelines

AI & Automation: Claude, Claude Code, MCP Server Development, LLM Tool Integration, Prompt Engineering

Infrastructure: DigitalOcean, Docker Compose, GitHub

EDUCATION & CERTIFICATIONS

B.S. Management Information Systems & Marketing | Florida State University, 2024, Magna Cum Laude

Microsoft Office Specialist (Excel) · SQL Bootcamp, Udemy · P3 Adaptive Advanced Power BI · PL-300 (in progress)
